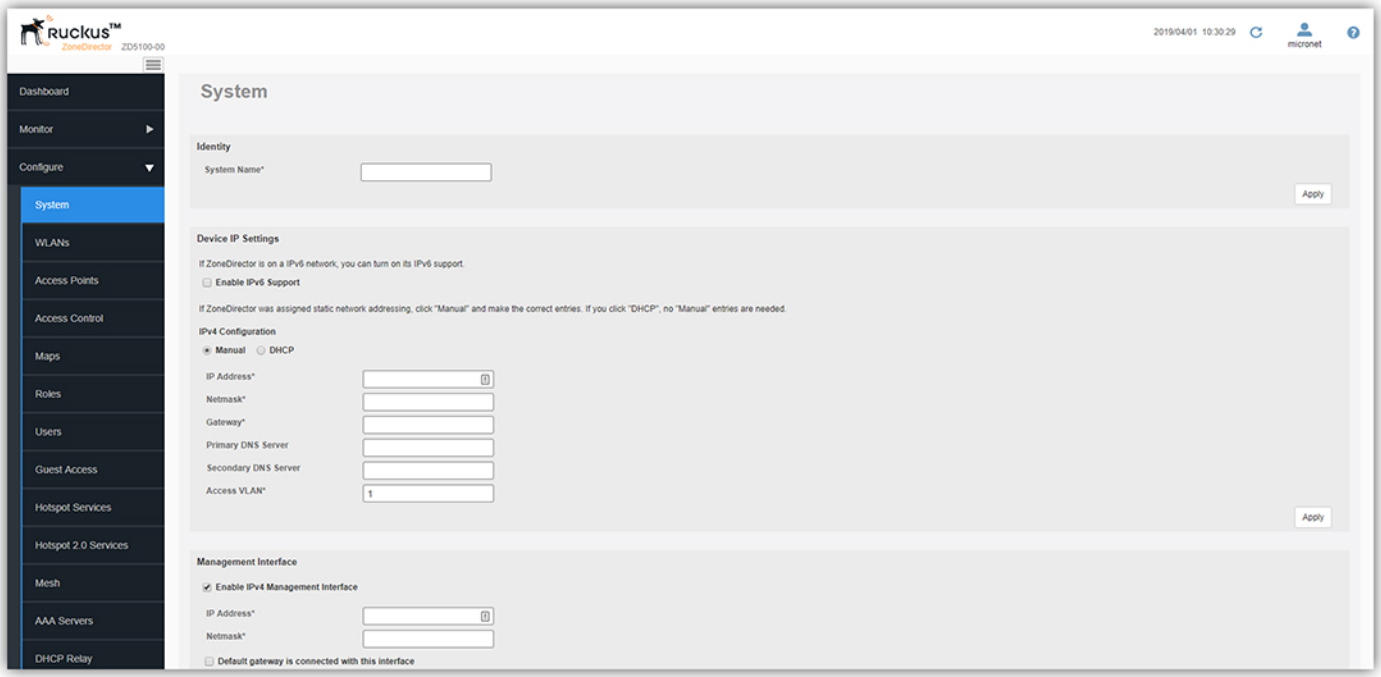
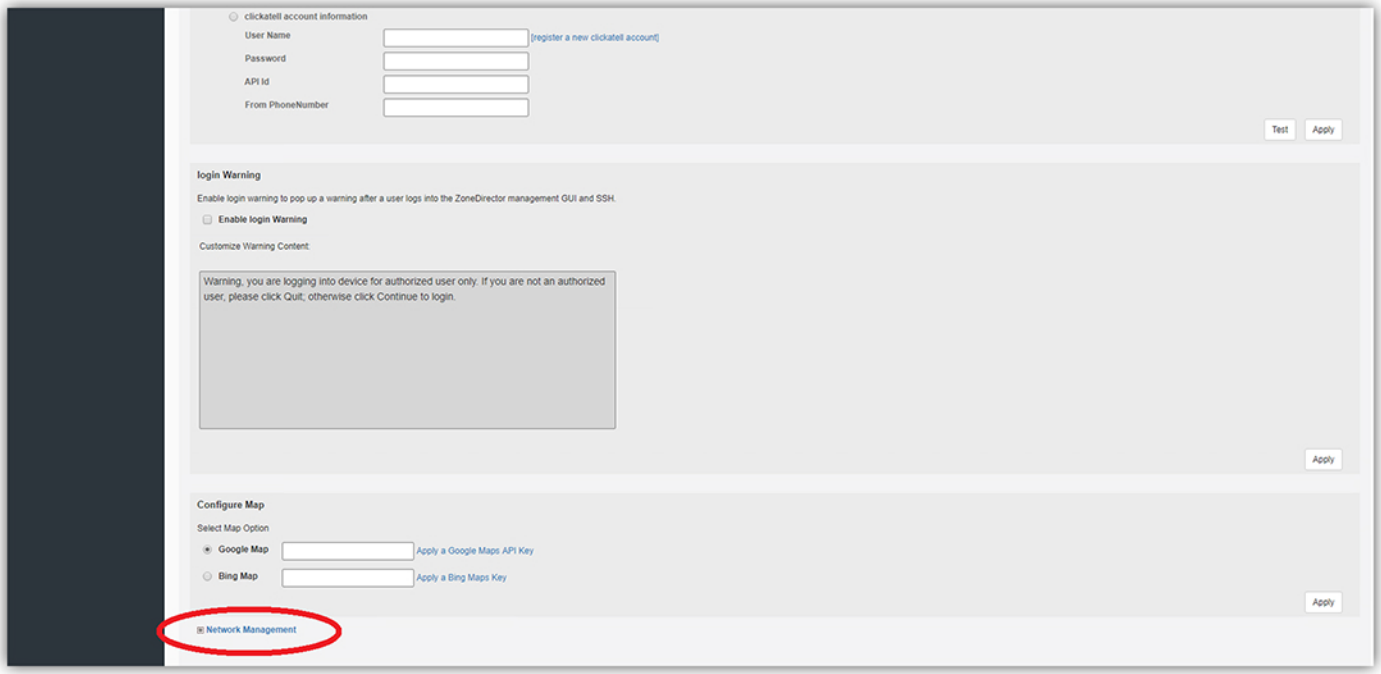
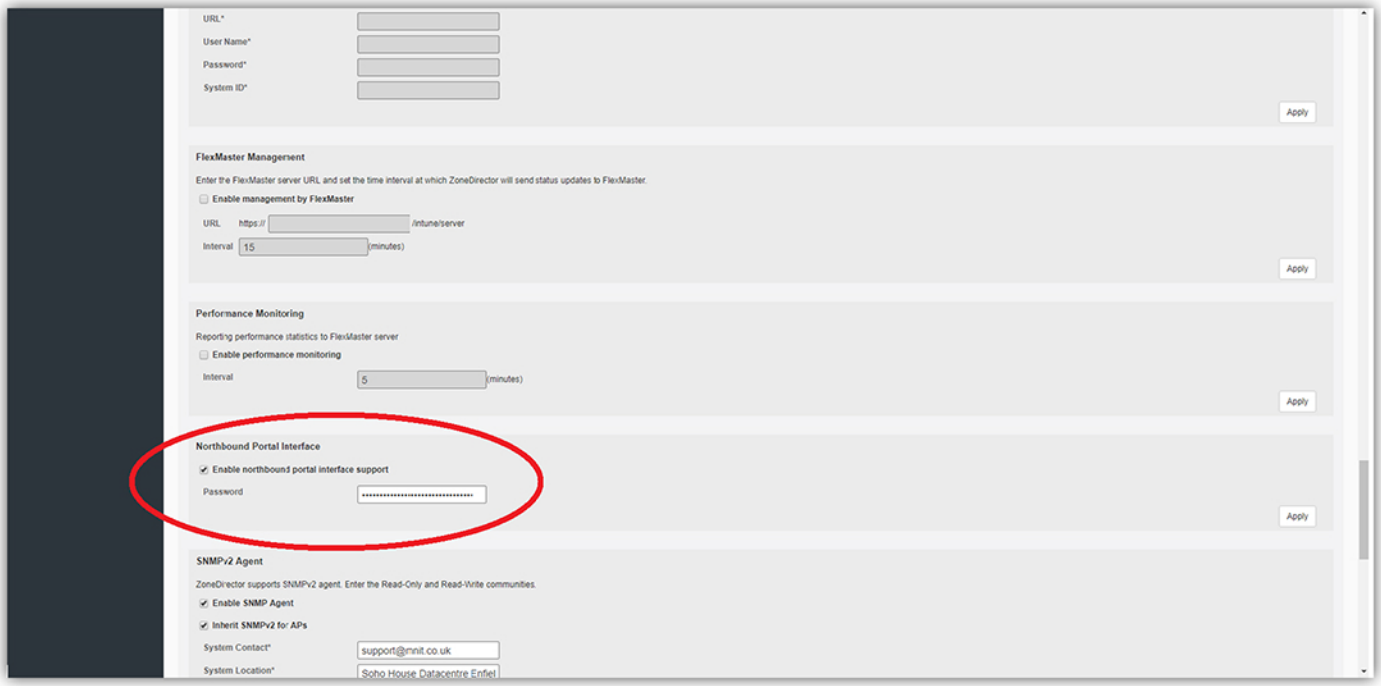
Ruckus - ZoneDirector user guide

Set a northbound secret, no username required for api
(For Smart Zone there is no user name required but if it is its API)





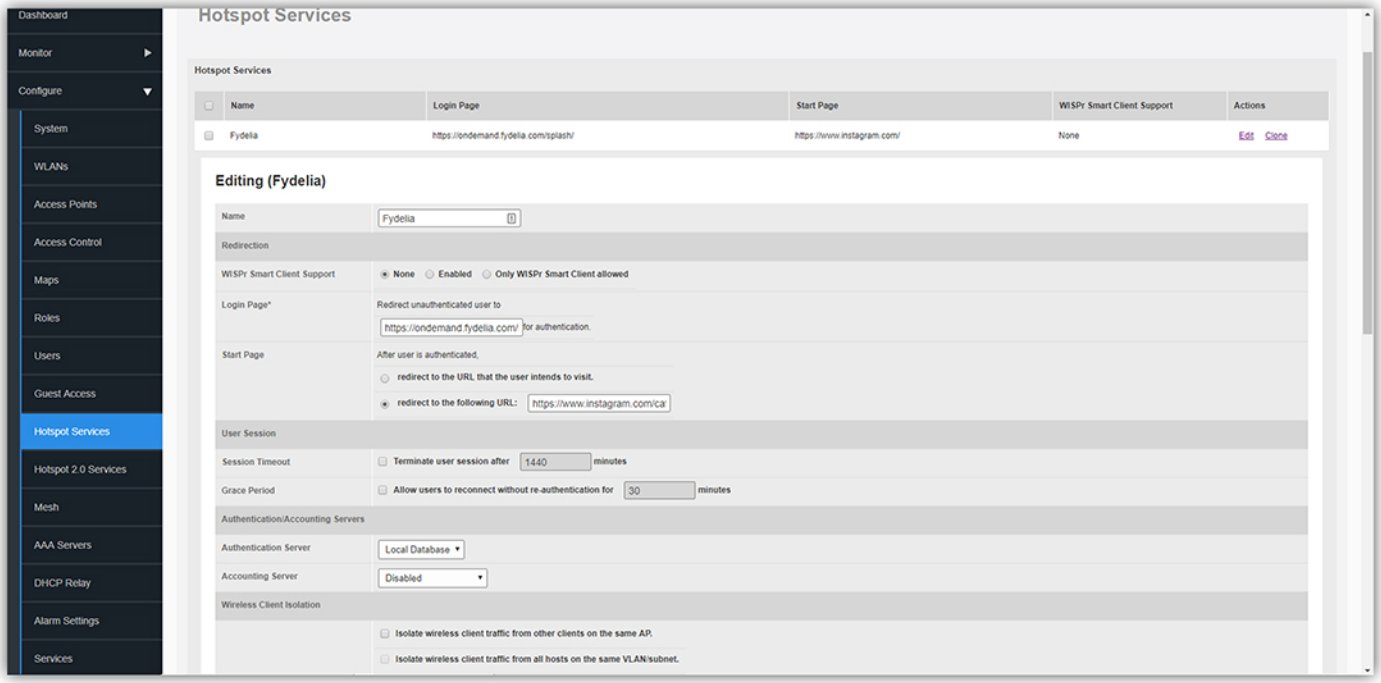
Fydelia



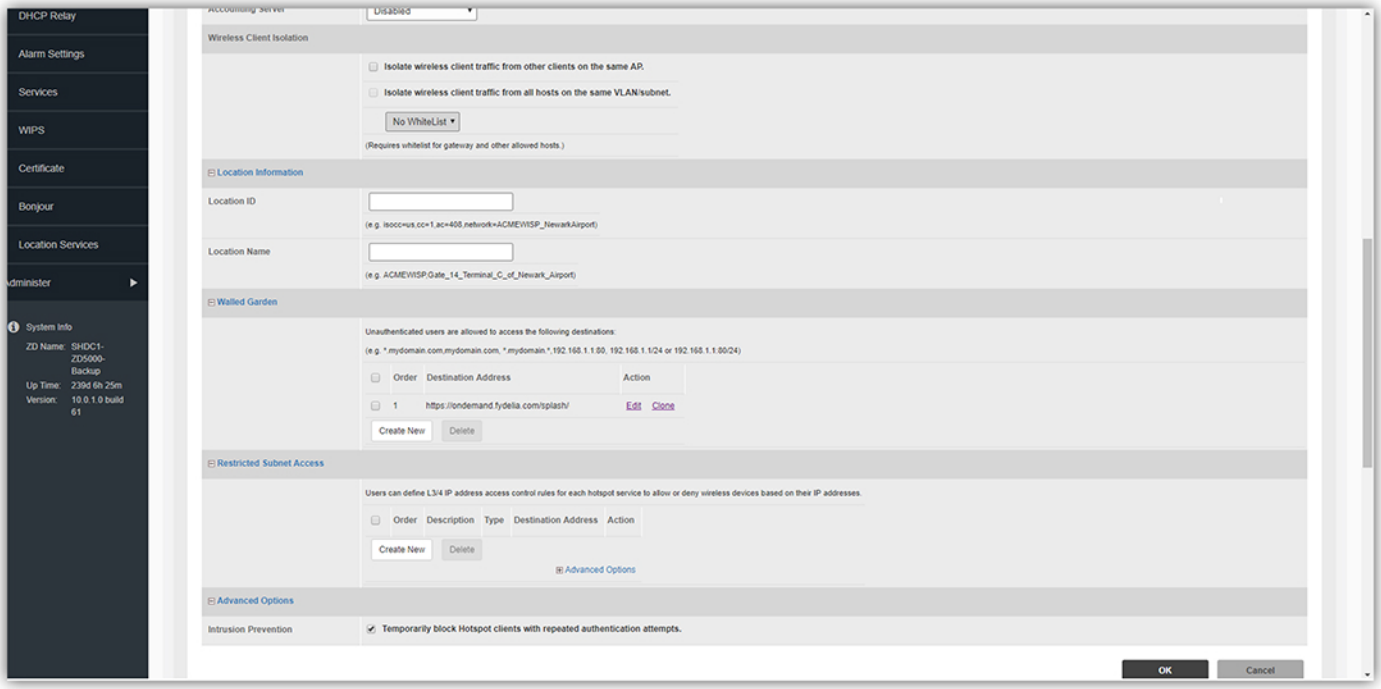
Radius user used by splash page needs to be setup as LocalDB user
(On ZD you cannot create a user, you will need to select, local database under the Hotspot Services Options)

(HotSpot Services) This is where you will configure the HotSpot settings (Set the Authentication/Accounting Servers, and Add the Fydelia link to the wall garden, smart client support set to none) for the WLAN to use.

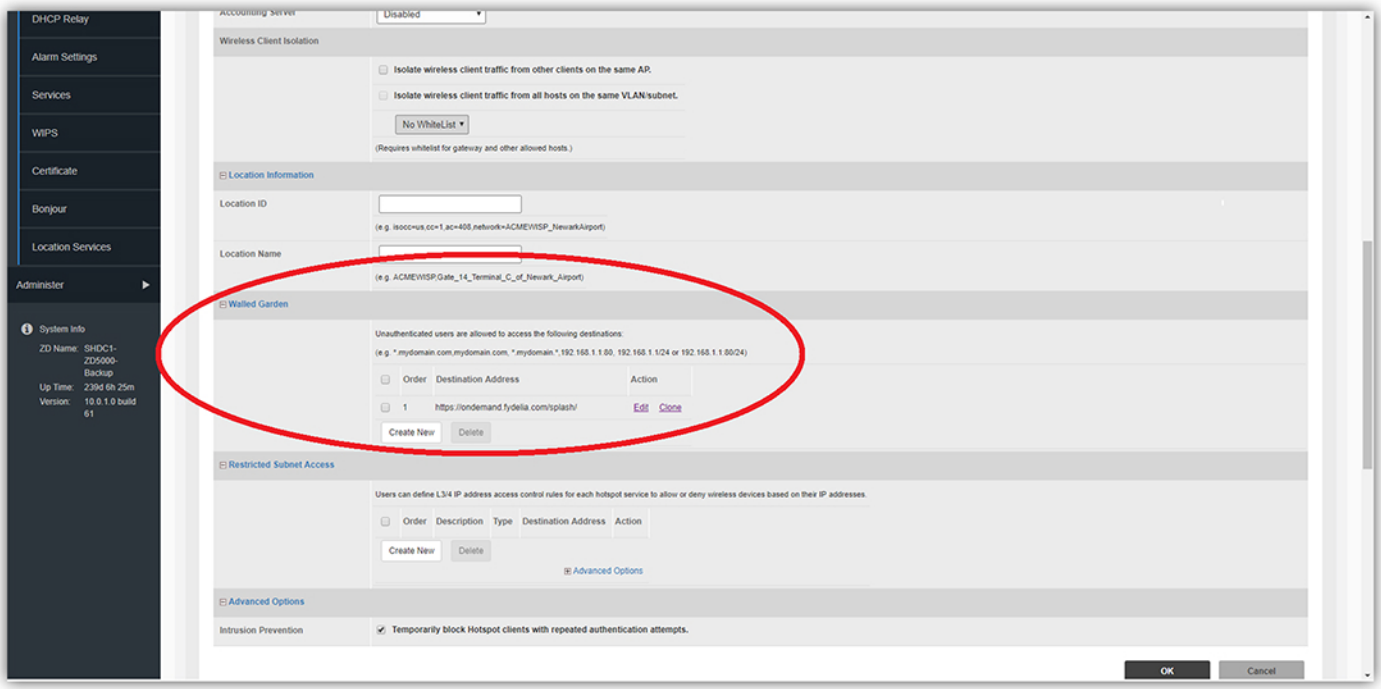
Make sure to enable Wireless client isolation.



Fydelia

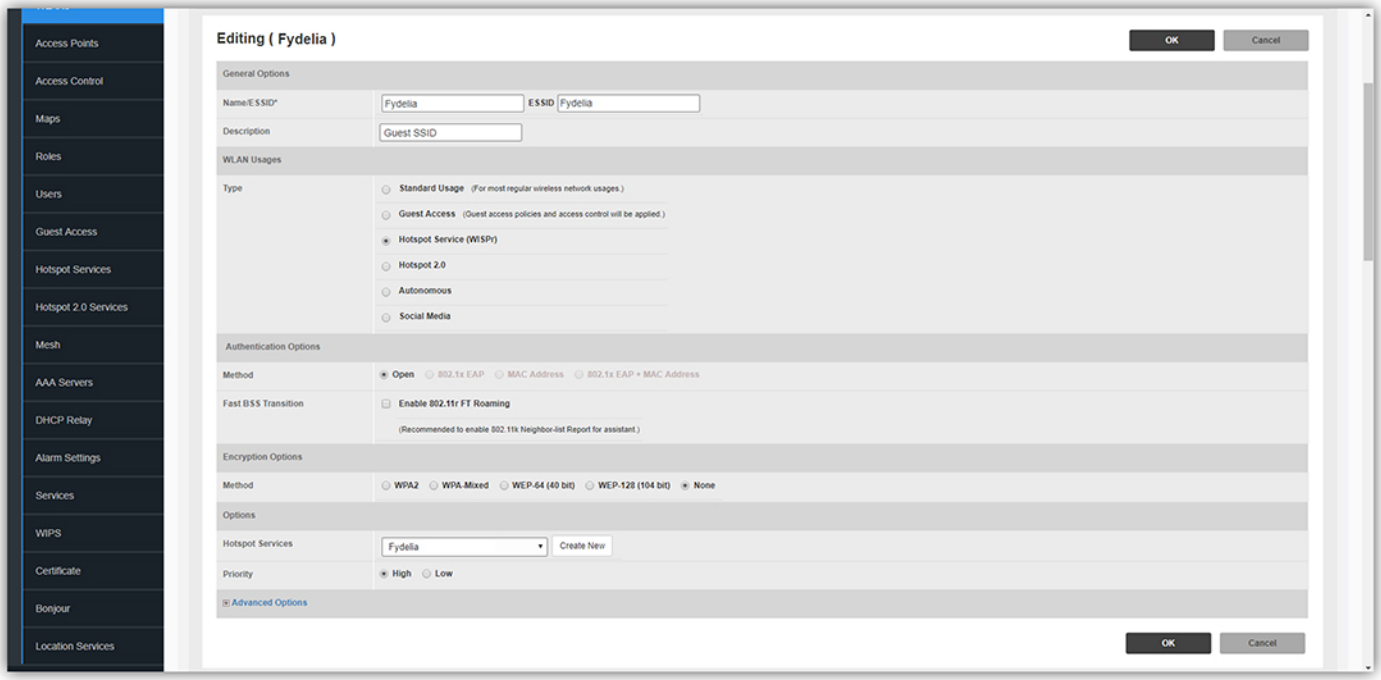


Please ensure that the Wall garden is populated otherwise the clients won't be able to see the page



(WLAN) Authentication and encryption options need to be set to: none and open

Fydelia



And then select Fydelia under hotspot services.

These options are not avalibe on this model of Zone Director but Fydelia will work without them.

- mac adress format lowercase without colons (ZD Standard)
- mac address should be encrypted (N/A)
- user IP should be Encrypted (N/A)
- https redirect enabled (Have to specify in URL)
- user session 1440 (Default)
